2. with cold room floor
3. with freezer room floor

MAXIMUM VERSATILITY

Ministore is a high quality and polyvalent cold room or freezer room. It offers a practical and economical solution for various applications in places such as bakeries, butcher shops, fish shops, vegetable wholesalers, groceries, florists, etc.

Ministore is perfect for use in hospitals, dispensaries, restaurants and laboratories. It is also an option for private use as a replacement for your cellar. In short, Ministore is an ideal solution for perfect hygiene, maximum storage and a compact housing.

PRACTICAL IN EVERY WAY

The Ministore cold rooms or freezer rooms can be assembled and disassembled quickly and easily. Their solid construction, which uses tongue-and-groove assembly with cold-bridge free eccentric hook fasteners, makes all this possible. They are also easy to move. Without a doubt, Ministore is a useful investment with a good and quick return, which contributes significantly to the efficiency of your business.

BUILT TO LAST

The Ministore was designed for intensive use, which is guaranteed by its solid construction and high quality materials. The isotherm door with smooth rubber gaskets and the central door handle system with cylinder lock and emergency release offers you easy access. The hardware is mostly made of rustproof materials. The sandwich panels, in 80 mm environment friendly CFC-free and HCFC-free polyurethane foam, ensure maximum insulation.

FLEXIBILITY IN DESIGN

According to your specific needs, different standard designs are available. You can select the inner dimensions as a multiple of a standard module of 300 mm.

Ministores can be supplied:

- Without floor (outside, 2,12m in height)
- With floor for positive temperatures (outside, 2,10m in height)
- With floor for negative temperatures (outside, 2,14m in height), fitted with floor ventilation profiles

For the entrance, you can also choose a wider door (920mm instead of 700mm), a glass door with double-glazing or insulated hatches.

Different types of reinforced floors are also available.

Ministores configured as a freezer room of up to -20°C are fitted with doorframe heating and a pressure release valve.
